

Custom Designed Consoles

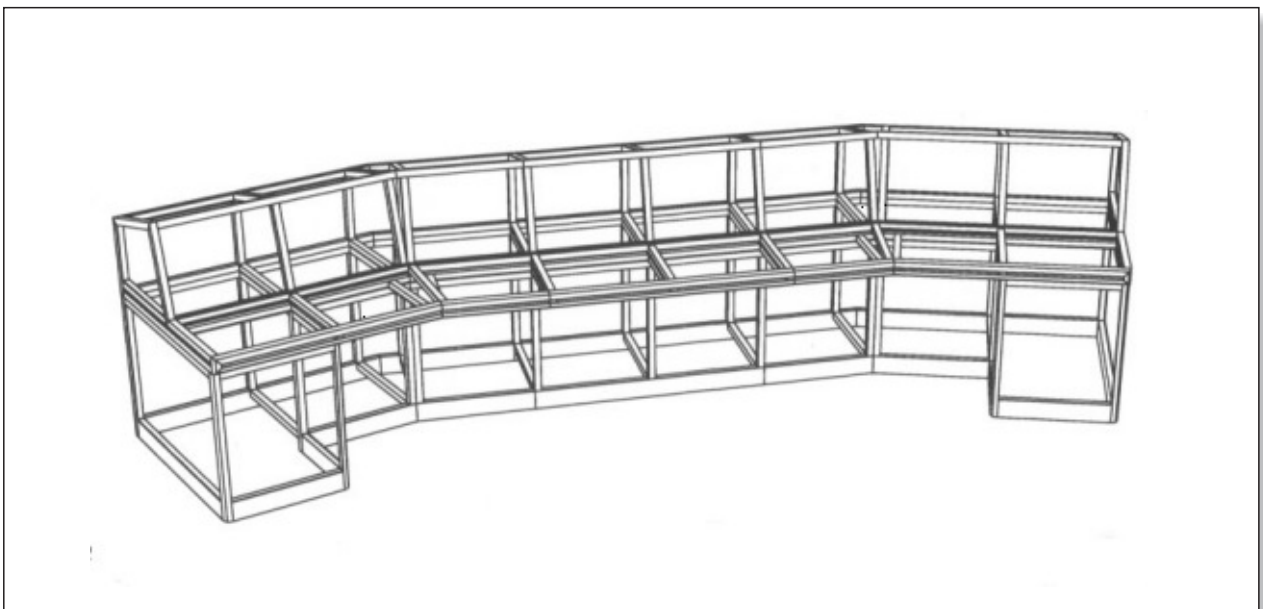

Hospital Modules

The system offers a complete, custom design and manufacturing service for all types of enclosure. Using a range of aluminium extrusions and patented connectors, enclosures can be developed to match your exact specification.

Light and durable, aluminium is the ideal material for use in the health sector. We can supply a wide range of drawers and shelf constructions, and shock absorbing castors.

Typical applications include monitor stacks, custom designed desks and integrated control rooms. We can design and manufacture any type of enclosure to suit your exact needs.

With a range of more than 30 aluminium extrusions, joined by a unique patented connector, this provides the system with its great versatility allowing installations to be modified or extended on site, or supplied in modules for space critical applications.

Our system is ideally suited for hospital trolleys, monitoring consoles, laboratory benches and nursing stations.

Manufacture

The system consists of over 30 different extrusions, joined with a patented connector. The connector itself is available in various forms to suit the required joint. All connectors are made of mild steel, bright zinc plated, and require M8 x 1 socket screws, 10mm long.

The decision which extrusion to use, and correspondingly which connector, depends on the design of the enclosure.

Other corners use different arrangements. This particularly applies to 3 dimensional arrangements such as the rounded 610 joint used with 190 extrusion and the 609 3 - way roof connector.

The connector ensures earth continuity between individual extrusions. The panels can be bonded to a common M6 earth screw.

Assembly

Large control desks or monitor stacks are designed to be split into 'door sized' sections.

On delivery to site, these can be re-assembled.

Finish

As we specialise in custom designed enclosures all manner of finishes are available:-

Framework - consists of anodised aluminium extrusions. These can be Satin anodised, black anodised, powder coated and anodised other colours.

Panels - are fixed or removable and can be finished in Alucobond, Aluminium, MDF Fibreboard or Plastic laminate.

Worksurfaces - can be of Alucobond, Laminate, Hardwood front edge, Linoleum on Aluminium sheet, Linoleum on MDF or Antistatic matting on aluminium sheet.
